

Online Auction and Bidding System – Abstract

An Online Auction and Bidding System is a digital platform where sellers list items or services and buyers complete for them in real-time over the internet. Users undergo 5 different steps in that first step if users create verified accounts as buyers, sellers, or administrators. Sellers post items with photos descriptions, base amount and end times. Now buyers place real time bids and the system instantly updates the current highest price. When the countdown timer expires the highest bidder wins the item automatically. At last, the platform processes the final transaction to the highest bidder through online payment.

The user has many benefits from online option those are users can bid from anywhere around the world. Users can get updates and real time tracking which will ensure fair bidding. Not only users sellers can also benefit through online option from exposing their items to different buyers all around the world. These days people are interested in online shopping because it is easy and convenient. This system mainly has 3 types admin, buyer and seller. The admin monitors the websites and checks what items are added and looks how transactions are happening. The seller can create an account on his own and he can put his product photos and its starting prices and he can control how along the auction will run. The buyer can also create an account and can look what items are there and start bidding what he or she likes.

The admin can create his own site by making the option automatic and secure it saves the time of buyers and make easy for them to buy as technology is growing the system will become safe by using artificial intelligence to protect users from fraud. It enables sellers to list products with details while buyers can place bids from anywhere. The automatic bidding has countdown timer and online payments process it makes easy for buyers in future it may improve a lot such as Ai based fraud detection and enhanced security this saves a lot of time of buyers and provides a fair and effective way to buy and sell products online.
